Parkinson's disease is a progressive neurological disorder that affects movement, balance, and coordination. It is the second most common neurodegenerative disorder after Alzheimer's disease. Parkinson's disease is caused by the loss of dopamine-producing cells in the brain. Dopamine is a neurotransmitter that helps to control movement. The loss of dopamine leads to the symptoms of Parkinson's disease, which include tremors, rigidity, slowness of movement, and impaired balance.

There is no cure for Parkinson's disease, but there are treatments that can help to manage the symptoms. These treatments include medication, surgery, and physical therapy. In addition to these treatments, there is a growing body of research that suggests that graphic medicine can be a helpful way to manage the symptoms of Parkinson's disease.

## **Graphic Medicine**

Graphic medicine is a field of medicine that uses comics, graphic novels, and other visual media to communicate health information. Graphic medicine can be used to educate patients about their condition, help them to cope with the challenges of living with a chronic illness, and provide support to their caregivers.

There are a number of benefits to using graphic medicine to manage the symptoms of Parkinson's disease. First, graphic medicine can help to educate patients about their condition. Comics and graphic novels can provide a clear and concise way to explain complex medical information. This can help patients to understand their diagnosis and treatment options. Second, graphic medicine can help patients to cope with the challenges of living with a chronic illness. Comics and graphic novels can provide a way for patients to express their feelings and connect with others who are going through similar experiences. Third, graphic medicine can provide support to caregivers. Comics and graphic novels can help caregivers to understand the challenges of caring for someone with Parkinson's disease and provide them with tools to cope with the stress of caregiving.
