When I was 35 years old, I received a positive test result for Huntington's Disease (HD). HD is a rare and fatal genetic disorder that affects the brain and nervous system. There is no cure or treatment for HD, and it eventually leads to death.

The news of my diagnosis was devastating. I felt like my world had been shattered. I had always been a healthy and active person, and I couldn't imagine my life without my health.

But I was determined not to let HD define me. I refused to give up on my life. I started to learn as much as I could about HD, and I began to connect with other people who were living with the disease.

The more I learned about HD, the more I realized that there was still hope. I learned that there are ways to manage the symptoms of HD, and that there are people who are living full and meaningful lives with the disease.

I decided to write this book to share my story with others who are living with HD. I want to show people that there is hope, even after a positive HD test result. I want to help people to understand the disease, and to provide them with the resources they need to live their best possible lives.

This book is a journey of hope and resilience. It is a story of how I have learned to live with HD, and how I have found joy and meaning in my life.

If you are living with HD, I hope that this book will inspire you. I hope that it will show you that there is still hope, even after a positive HD test result. I hope that it will help you to understand the disease, and to provide you with the resources you need to live your best possible life.

You are not alone. There are people who understand what you are going through. There are people who care about you. And there is hope.
